

Indigo Software Limited - Mobile Edge – Mobile Connector for Blackberry or Windows Mobile

Mobile Edge, the mobile connector for Blackberry or Windows Mobile, allows users to quickly and easily extend their Customer Relationship Management (CRM) software to Blackberry or Windows Mobile smartphones.

Mobile Edge is a pre-built application based on Web Services and open standards, with templates to immediately connect iExtensions CRM for Lotus Notes, Microsoft Dynamics CRM, SugarCRM, NetSuite and Salesforce.com.

It quickly connects CRM applications to the Blackberry or Windows Mobile while offering users remarkable flexibility and ease of use. Furthermore, due to its inherent configurability, Mobile Edge is deployed in days, not weeks—allowing your mobile users to immediately access their mission-critical information anytime, anywhere within seconds on their Blackberry or Windows Mobile.

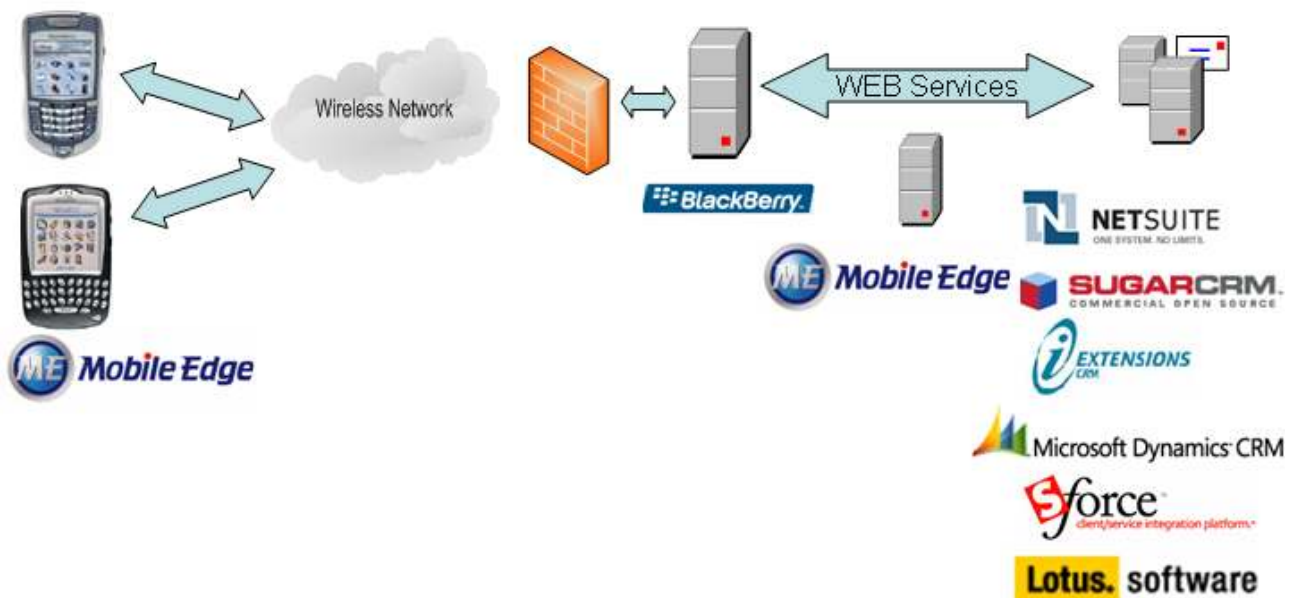

Mobile Edge is not browser based. It uses a client/server architecture. This means users get complete online and offline capabilities, even when out of cellular coverage.

Why Choose Mobile Edge?

Mobile Edge lets you quickly unite your CRM system with your wireless investments. The work is done for you through one configurable application. You gain tight email integration, the look and feel and security features inherent in CRM, as well as the Blackberry or Windows Mobile smartphone. Daily tasks such as updating sales pipelines, accessing contacts and logging call reports happens in seconds with Mobile Edge.
